1 BEST DESIGN

1.1 Selection of best design

1.2 Chosen aspects from members

Here you should add the screenshots/snippets of the different aspects from each other's

designs.

Below the screenshot you will explain the following:

1.2.1 Whose part was chosen

We combined all three of our logos into one final logo

1.2.2 Why was it chosen

We designed a new logo to fit in all our design aspects and chose that one because it is a combination of all of our work put together.

2 THE CHOSEN SCENARIO

Have a short paragraph that indicates as group which scenario you have chosen.

We chose the Gaming and Esports scenario because two of our group members had already selected and worked with this scenario during the individual stage. As a group, we felt that it would be best to continue with this scenario because they already had some background knowledge and understanding of the topic. This gives us a good starting point and allows us to build on the research and ideas that were already developed. We also felt that Gaming and Esports is an interesting and relevant topic that gives us many opportunities to be creative and explore different ideas as a group.

2.1 The final Logo

Paste

the

logo

here.

Add an explanation that explains the logo

This logo is a combination of all of our logo designs that we did during the individual work stage, the hands grabbing onto the controller are from shaundre's design, the controller is from carlins design, and the I

2.2 The final colour pallet

3 Final Colour Palette

Colour	Hex Code	Use
Black	#010202	Main background
Dark Charcoal	#1D2621	Controller and darker design elements
Cyan Blue	#09BED1	Highlights, outlines and branding
Lime Green	#80D338	Highlights, outlines and branding
Gold/Yellow	#F5AF30	Hands and accent details
Silver/Grey	#C0BFAE	Secondary text and smaller details

4 Explanation of the Colour Palette

Our final colour palette consists mainly of **black, cyan blue, lime green, gold and silver**. We chose these colours because they fit well with the gaming and Esports theme of **Next Level Gaming**.

Black and dark charcoal are used as the main background colours because they create a modern and professional gaming look. They also allow the brighter colours to stand out clearly. **Cyan blue and lime green** are the main brand colours and give the design an energetic, futuristic and digital feel, which suits the gaming industry. The two colours are also used in the words “Next Level”, helping the name stand out and making the logo more recognisable.

The **gold/yellow** used for the hands creates contrast against the darker background and draws attention to the player interacting with the controller. Finally, **silver and grey** are used for smaller details and text to give the design a clean and polished appearance without distracting from the main colours.

Overall, the colour palette creates a bold, energetic and modern identity that represents gaming, technology and competition.

5 RESEARCH

5.1 Best design practises for Websites

Explanation to why design practises are needed

These design practices are needed because they make the website and mobile application **easy to use, organised, visually appealing and accessible on different devices**. For a gaming and Esports platform, users should be able to find games, tournaments, news and other important content quickly without becoming confused.

5.1.1 Website navigation

Navigation:

For the navigation of the website and mobile app user must be able to spot and access import sections. The main design practices for the website and mobile app are navigation, layout of screens, responsive design and user interface design.

5.1.2 Website screen layout

Layout of Screens:

For our gaming Website and Mobile application the layout should make gaming content the main focus of it.

Best practices for screen layout:

Using headings to separate different sections on a screen.

Placing the most important information near the top of the screen.

Using gaming images and game artwork to attract attention without making the screen overcrowded.

Making buttons and interactive elements easy to identify on the website and Application.

5.1.3 Website responsive design

Responsive design:

Responsive design is important because users may access the website using different devices to access our Website and Mobile application.

Best practices for responsive design:

Design layouts that can adjust to different screen widths.

Make text readable on smaller screens.

Make images and other media resize appropriately.

Adjust the navigation depending on the available screen space.

5.1.4 Website user interface design

User Interface Design:

For the gaming website and mobile application the interface should also create an appropriate gaming atmosphere.

Best practices for UI design:

Using the same colour scheme throughout the website and Mobile application.

Make use of icons that clearly represent their purpose.

Using clear headings and labels.

Using consistent button styles across different screens.

Avoiding unnecessary visual elements that make the interface confusing.

5.1.5 Mobile Application navigation

Mobile Application Navigation:

- Helping users move easily between different pages of the Mobile Application.
- Uses clear menus, buttons and navigation bars.
- Prevent users from getting lost or confused in the Mobile application.

5.1.6 Mobile Application screen layout

Mobile Application Screen Layout:

- Organise the text, images, buttons and information clearly.
- Preventing the screen from looking crowded or confusing for the user when using the Application.
- Making the application clean and organised.

5.1.7 Mobile Application responsive design

Mobile Application Responsive Design:

- Making sure the application works on different screen sizes.
- Allow content to adjust to different mobile devices.
- Providing a consistent experience for users on different devices.

5.1.8 Mobile Application user interface design

Mobile Application User Interface Design:

- Making the application visually attractive for users.
- Using suitable colours, fonts, icons and buttons.
- Making features easier for users to understand and interact with.

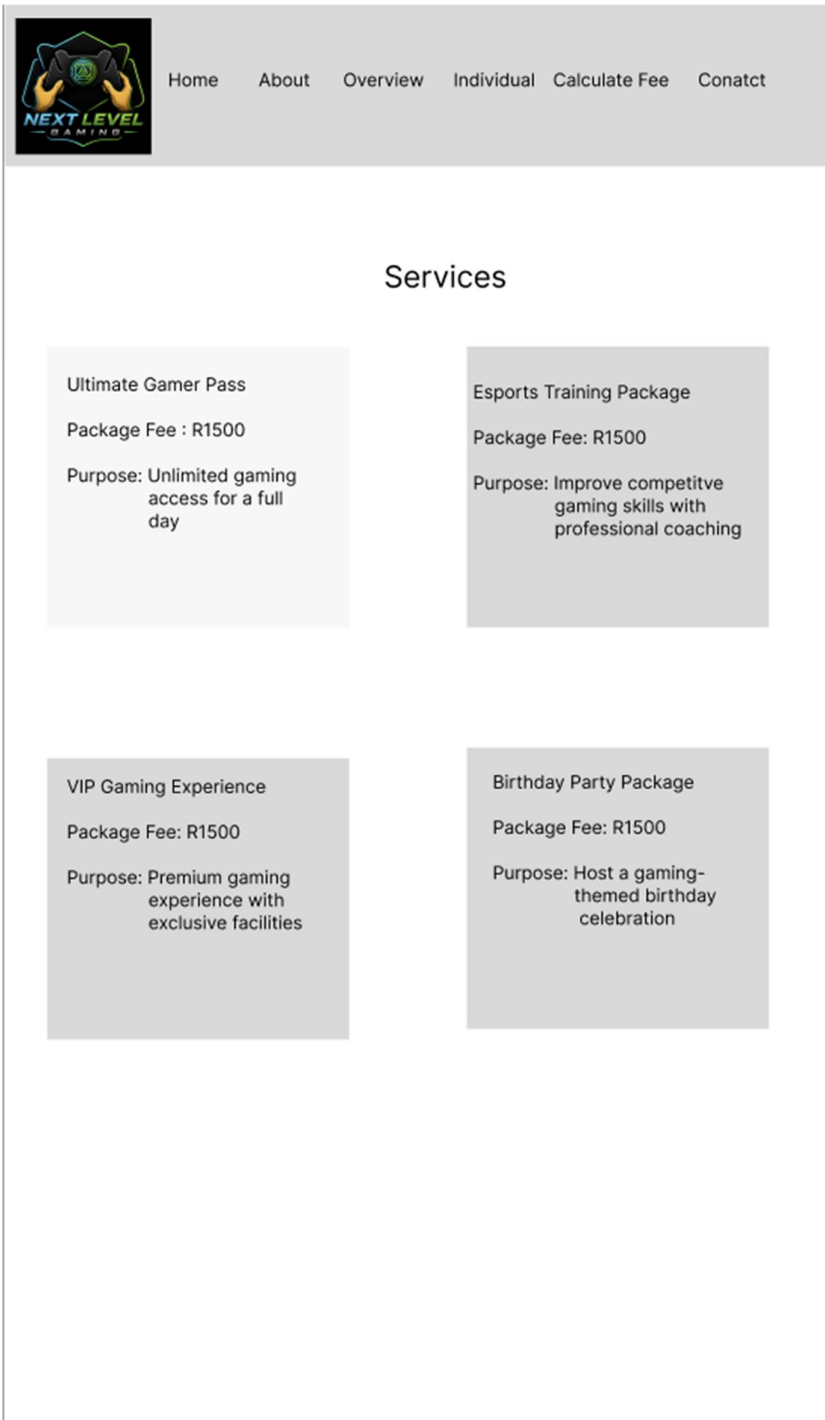

6 LOW FIDELITY WIREFRAMES

6.1 Website Wireframes

By using figma, you will design the 6 pages for the website and paste the wireframes here by indicating the different screens

Next Level Gaming

About Us

Mission

To create an easy to use platform that will enable the know the services available, gather information about calculate the cost of the service required, and comm organization.

Vision

To become a reliable and user-friendly digital environr easier for people to access information and services a appropriate decisions.

Our Values

Transparency We Provide clear, honest and easy to understand information	Simplicity We simplify complex information and processes so users can complete task with minimal difficulty
Integrity We simplify complex information and processes so users can complete tasks with minimal difficulty	User-Centred Services We put the needs of individuals first and continuously strive to provide a positive user experience
